CERTIFICATE OF ANTIVIRAL EFFICIENCY OF THE NUVOHLA ROOM/LIFT EQUIPMENT

Doctor ROSER REIG RIUS director of INDUSTRIAL LAB R. REIG, S.L. with CIF B65324238 and address Garcilaso 4 in Sabadell (Barcelona) Spain.

CERTIFIES:

That INDUSTRIAL LAB R. REIG, S.L. has obtained, on behalf of **AIRTECNICS**, a strain of MengoVirusvMCo CECT100000 from the Colección Española de CultivosTipo (Spanish Type Culture Collection).

Mengoviruses are non-enveloped RNA viruses, just like the test microorganisms mentioned in the standard. The MengoVirus belongs to the Picornaviridae family and the coronavirus, which causes the COVID-19 disease, belongs to the Coronaviridae. Both viruses are class IV viruses in the Baltimore system and they have positive sense single-stranded RNA. Single-stranded RNA is ultimately the target of the destructive action, therefore, the mengovirus has been used to certificate the SARS-CoV-2 disinfection tests, according to the adaptation of the UNE-EN 14476 standard (*Antiseptics and chemical disinfectants; quantitative suspension test for the evaluation of viricidal activity in medicine; test methods and requirements*) to evaluate the efficacy of the “**NUVOHLA ROOM/LIFT**” that AIRTECNICS, S.L. commercializes, analyzing the **AIR INOCULATED** with the virus before and after the treatment with the already mentioned equipment.

According to the tests carried out in the INDUSTRIAL LAB R. REIG, S.L. the tested **Nuvohla Room/Lift** equipment has demonstrated, **from 30 minutes, an antiviral activity** on inoculated viruses of **99.54%**.
