Active OAF technology

The new range of purifying devices Nuvohla OAF technology emulators (Open Air Factor) generate and expand effectively neutral hydroxyl radicals (OH·) to inactivate up to 99.99% of pathogens and air and surface contaminants.

OAF technology meets the exposure limits to chemical agents adopted by the National Institute of Safety and Hygiene (INSS). These parameters include ozone (<0.05ppm) and hydrogen peroxide (<1ppm or <0.1mg/m³) emissions.
