

Technical features

Range (door width)
Up to 5 m

Airflow / Length
5400 - 14400 m³/h
1,5 m to 3 m

Fans
Centrifugal
5-speed

Chamber temperature
>0°C to -25°C

Protection grade
Air curtain IP20 [*]
Fans IP44 []**

Control
Plug&Play manual regulator
+ IR remote control
(Optional Clever Control)

Casing
Galvanised steel /
Stainless Steel (optional)

Grille type
Circular perforated

Outlet vanes
Aluminium, airfoil type
Adjustable 0-15° each side

RAL 9016
standard

Stainless
steel

[*] Optional M or G IP55 air curtain.

[**] Optional IP55 fans.

Aqua Aero coating
on request

Other colors
on request

TWIN KPL air curtain system has been designed to offer a versatile solution to any type of cold room: refrigerators (over 0°C) and freezers (0°C up to -25°C).

Highly efficient climatic separation against thermal losses caused by the large temperature difference with 2 jets and recirculation technology.

The system consists of two air curtains facing each other vertically with the jets reversed. This double jet works as a closed circuit creating a separation zone at the door entrance. Thanks to this double air barrier, is the best alternative to the TRIOJET SYSTEM when space is limited.
It requires a ceiling to cover 100% of the opening with the 2 jets (not included, must be provided by others).

On option heating could be implemented to improve ice reduction on the floor and humidity control.

We recommend Aqua Aero coating (15.000 hours salt spray test) or stainless steel to improve the protection against corrosion.

With double-inlet centrifugal low noise fans driven by an external rotor motor.

Includes Plug&Play control with 7m RJ45 cable and infrared remote control. Optionally can be regulated with Advanced Clever Control (programmable, automatic, intelligent, compatible with Modbus RTU for BMS).

Functioning

We consider a chamber at -15°C and a pre-chamber at 5°C (thermal leap 20°C).

The TWIN KPL SYSTEM with two air curtains facing each other, creates a separation zone in the door that acts as a very efficient barrier against adverse situations.

This separation zone is created by self-recirculation in such a way that both air curtains suck the jet from the other curtain. This separation area is maintained between the temperature of the chamber and the pre-chamber thus reducing the temperature exchange between both sides.

Optionally, depending on the installation, electrical heating can be used to help removing ice from the ground and reduce humidity.

Optional accessories

Supports and installation

Foot support
SPF-MG
(Galv. / SS)

Joining kit
SPJ-MG
