

General Features

- Ventilation box specially designed for temperatures up to 220°C.
- Perfect for air extraction on chimneys and recirculation/ventilation on industrial ovens.
- Internal division between motor and impeller to minimize the motor temperature exposure.
- Termoprotected external rotor motor.
- Internal connections as standard, on option can be equipped with an IP54 external box.
- Large top service panel.
- Circular connection into standard 150mm ducts.
- On option:
 - G4 (ZLM) filter (according to EN 779) which can work up to 90°C.
 - G2 (metallic mesh) filter (according to EN 779) which can work up to 220°C.
